

EnviroX L.L.C.

From a research project to a full line of products

EnviroX L.L.C. was started in 1995 as a research project. The primary goal was to develop a cleaning technology that would reduce toxicity in a meaningful way. A second goal was to reduce the use of packaging materials, energy, and landfill space by performing all or most of the general janitorial cleaning tasks with one, concentrated product.

After almost a year of formulation work, it was found that oxygen was the answer, and hydrogen peroxide was the vehicle.

"It was an exciting time," recalled Patrick Stewart, CEO of EnviroX. "Over the next few months, we eliminated the need for traditional, higher toxicity ingredients such as alcohols, glycol ethers, acid, caustics, amines, ammonia, bleach, phosphates, detergents, and quaternary ammonia compounds. The result was one, low toxicity product that performed all the general janitorial cleaning tasks at various dilution rates. The product was named H2Orange2, because the formula contained hydrogen peroxide (H2O2) and orange oil."

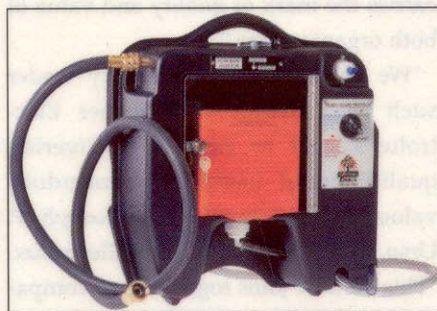

H2Orange2 was introduced at the 1998 ISSA Show in Las Vegas. At that time, EnviroX had about a dozen distributors, and no manufacturers' representatives. "By the end of 2001 H2Orange2 had proven itself to 15 manufacturers'

representative groups and 160 distributors all over the country," Stewart said.

H2Orange2 has been included in the environmentally preferable state programs of Massachusetts and Vermont. It is used in both the Seattle and San Francisco programs as well as dozens of toxicity reduction initiatives in school systems across the country.

In late 1999, EnviroX recognized the need to dispense different cleaning solutions with one, hand-held spray unit, using H2Orange2. This second EnviroX R&D project resulted in the introduction of Spray Buddy in the summer of 2001. The patent-pending Spray Buddy Personal Dispensing System (PDS) replaces multiple products and spray bottles with one easy-to-use pump-pressurized sprayer for dispensing H2Orange2. The Spray Buddy has four selectable dilution rates for every cleaning need, including window, counter and grout cleaning, carpet spotting, surface degreasing and sanitizing. The Spray Buddy also eliminates the need for repeatedly squeezing a trigger sprayer.

The Spray Buddy joins the EnviroX family of dispensers, including the One-Cube wall mount/shelf mount dispenser

One-Cube dispenser.

as well as four ready-to-use products based on the one H2O2 formula.

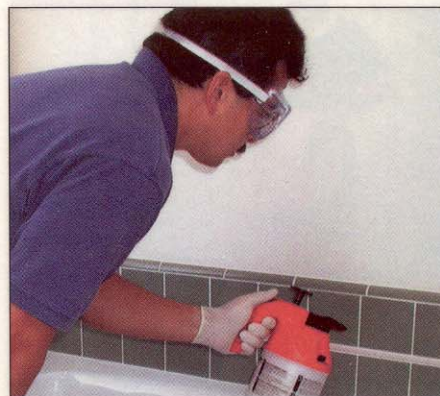

EnviroX moved into a new 35,000 sq. ft. facility late last year. EnviroX now

H2Orange2 is available in ready-to-use dispensers.

employs twenty-five people at a five-acre site in Danville, Illinois. Despite its growth, EnviroX maintains a simple philosophy.

"We are a collection of unconventional people, doing innovative things, all over the company. There are no 'suits' at EnviroX--just working folks. We believe

Spray Buddy.

that low toxicity, environmentally preferable products will dominate cleaning tasks in this industry. And, we believe that oxygen modified products will play a major role in all general cleaning operations."

"EnviroX L.L.C. was founded on innovation," Stewart added. "H2Orange2 is the first and only EPA registered, hydrogen peroxide modified, multi-purpose cleaning product in the USA. We are the leader in this technology. Our mission is to continue to innovate, continue to be the leader, and continue bringing new technologies to the cleaning business."
