## Pioneering Patent Issued For H2O2 Technology

A U.S. patent was issued in December 2001 to EnvirOx L.L.C., covering formulas and methods of use for H2Orange2, a hydrogen peroxide based multi-purpose cleaner-degreaser-sanitizer-virucide.

The patent protects H2Orange2's proprietary combination of surfactants, hydrogen peroxide, and solvents in a liquid janitorial cleaning product.

"Right now we are the only manufacturer of an EPA-registered hydrogen peroxide cleaning system," said EnvirOx CEO Patrick Stewart.

In addition to being the first to develop and market a hydrogen peroxide-based cleaning system in the United States, EnvirOx is the first to receive a U.S. EPA registration for a dilutable product, as a "reduced toxicity" sanitizer-virucide-HIV-stat, without a DANGER or POISON warning required.

"H2Orange2 is a different class of product," he added. "EnvirOx has developed a new technology based on hydrogen peroxide. It is different, and it works better."

Stewart said H2Orange2 does four things better than any conventional product: odor destruction, tile and grout cleaning, carpet cleaning, and streak-free glass cleaning.

"It is also an environmentally preferable product that improves IAQ," added Stewart. "It virtually eliminates VOCs emitted from cleaning solutions and is very effective at cleaning and removing mold and mildew. Used properly, it's a fungicide too. EnvirOx H2Orange2 is available with a range of dilution control systems that allow end-users to apply the product at several different strengths. Those dilutions clean glass, hard surface floors of all kinds, tile and grout, carpet, restrooms, food and body oils, marble and stone, destroy odors and provide biocide properties as a sanitizer and virucide."

H2Orange2 is an approved environmentally preferable product in the states of Vermont and Massachusetts, and the city of Seattle. It is used in the city of San Francisco program and recommended in the Department of Interior/NISH list of products for green janitorial cleaning.

The H2Orange2 formula is available as a dilutable concentrate, used in combination with proprietary wall-mounted, portable, or hand-held dispensing systems, or in four ready-to-use formulations.

EnvirOx has also recently introduced and applied for U.S. patent protecting Spray Buddy. Spray Buddy is a hand-held personal dispensing system that eliminates the use of multiple products and spray bottles in cleaning operations when combined with H2Orange2.
